

The Through-Line

One-line claim, content map, and the gather-list — words to a working portfolio

One-line claim

“I build AI systems the way a security audit would want them built.”

Picked from 10 generated options. Chosen because it's a single, ownable stance rather than a feature list — it doesn't need the word 'secure' to carry the weight, and it sets up the 18/18 adversarial-test result as the proof, not a decoration.

Content map

One page (single scrolling site, sectioned like a report) rather than a multi-page site — the right scope for one case study at this stage. Each section below is the 'page' the brief asks for; the case leads immediately after the hero, before anything else.

Section	Order	Content / case	Named CTA
Hero	1	One-line claim + credibility strip (18/18 tests passed)	Book a technical chat
Case study	2	Scholarship Agreement Assistant — strongest (only) case; leads immediately, before About	(reads on — no CTA, not yet earned)
Evaluation & Artifacts	3	Eval harness / repo links so claims are checkable, not just asserted	View eval harness (repo link)
About	4	Technical point of view, not a bio — comes after the proof, not before it	(reads on)
Contact	5	Single CTA repeated, email as secondary text only	Book a technical chat

*Every CTA ladders to the same single action — **book a technical chat** — the one action named in Week 1. No competing CTAs anywhere on the page (Contact's email is secondary text, not a second button).*

Still need to gather

- Real screenshots of the working prototype (login screen, chat view, Security Test tab) — obtained and already placed in the Case study section; kept here as a completed line so the list stays honest about what's done vs. outstanding.
- Public repo URL for the eval harness / test suite — referenced in Evaluation & Artifacts but not yet linked to a live, public repo.
- Confirmed scheduling link (Calendly or equivalent) — the CTA currently points to a placeholder anchor, not a working booking flow.

- A real photo for the About section, if one is ever added — intentionally left text-only until a real one exists, rather than substituted with anything generated.
- Internship (ML track) work is on a separate, unfinished track (FlyRank warehouse notebooks) and isn't part of this portfolio's claim or case study — noted here only so it's not mistaken for missing portfolio proof.
