

Plant Your Flag

Custom domain, analytics, launch hygiene, and the graduate badge

1. Domain

Live URL: <https://cevdetsatar-ml-portfolio.netlify.app> — HTTPS live and automatic via Netlify. Kept the existing clean subdomain rather than buying a paid domain (budget constraint from the Three Roads decision) and rather than renaming it, since the current name is already submitted, verified in Google Search Console, and linked from LinkedIn and the CV — renaming now would break all three.

2. Analytics

Google Analytics (GA4) installed via the gtag.js snippet in the page's <head>. Property: “Cevo Portfolio,” stream: “Cevdet Satar Portfolio,” Measurement ID G-TS0M5WJ5Y5. Google’s own tag-testing tool confirmed installation directly: “Google etiketiniz web sitenizde do■ru ■ekilde alg■landı■” (your Google tag was correctly detected on your website) — verified live against the deployed site, not just checked in code.

3. Launch hygiene

Item	Status
Favicon	Present (custom checkmark mark, SVG), confirmed rendering in browser tabs.
Page title	“Secure, domain-specific ML assistants — proof of work Cevdet Satar” — includes name for findability.
Meta description	Present, summarizes the claim in one sentence.
Social-share preview — first check	FAILED on first check: LinkedIn Post Inspector showed a stretched, blurry image because the og:image was a portrait UI screenshot forced into a landscape (1.91:1) share-card slot.
Social-share preview — fix	Designed a proper 1200×630 branded share card (matching the site’s own dark/amber identity) and pointed og:image/twitter:image at it, with explicit og:image:width/height tags. Re-tested in LinkedIn Post Inspector — clean, sharp, correctly cropped.
Phone re-check	Final address opened once more on a real phone after all launch changes — layout, form, and diagram confirmed still correct.

New share card

I build AI systems the way a security audit would want them built.

Domain-specific ML assistants that handle sensitive organizational data without leaking it — proven through adversarial testing, not just architecture claims.

- 18/18 adversarial test scenarios passed

4. Graduate badge

Installed and verified. The AI Fluency capstone was accepted, the Certificate of Completion (D11) generated, and a real credential ID issued: **FR-D11-54C31-40A4E**. The footer now links directly to the live FlyRank verification page for this credential, confirmed showing recipient “Cevdet Satar,” track “AI Fluency,” and status “Verified.” The earlier placeholder note (“pending capstone approval”) was replaced once the real credential existed — nothing was published before it was real.

Verify link: https://internship.flyrank.ai/verify/FR-D11-54C31-40A4E?first_name=Cevdet
