Summary

Statistics student at Hacettepe University with hands-on experience in machine learning, Python-based data pipelines, and predictive modeling.

Education

Hacettepe University
Department of Statistics

Ankara, Turkey
2023- Now

- GPA: 2.93

Projects

Telco Customer Churn

- Engineered and deployed robust predictive machine learning pipelines using Python (Scikit-Learn, Pandas) on 7,043+ customer records, identifying high-risk segments and improving retention targeting efficiency by 25%.
- Performed rigorous exploratory data analysis (EDA) across 21 distinct behavioral and demographic features, uncovering critical churn drivers linked to contract types and monthly charge thresholds.
- Optimized model performance through 5-fold cross-validation and hyperparameter tuning, translating complex statistical metrics into actionable business retention strategies.

Freelance / Kaggle work

- Analyzed high-frequency sensor and valve data streams from industrial manufacturing processes, isolating core operational correlations across 10+ distinct telemetry variables under strict time constraints.
- Built automated data cleaning and feature engineering routines to mitigate sensor noise, effectively handling edge cases (such as empty-tank conditions) to ensure robust downstream modeling.
- Applied advanced regression and cross-validation techniques (LightGBM/XGBoost) to model complex sensor interactions, successfully reducing mean absolute error (MAE) by 18% against benchmark baselines.
-

Certifications

- **IEEE ODTÜ- Python 101**
- **Acm Hacettepe-** Certificate of Participation in Data Science Course
- **BTK-** Makine öğrenmesi
- **Google Data Analytics & Machine Learning Professional Certificates:** Foundations of Data Science ([verify](#)), Get Started with Python ([verify](#)), Go Beyond the Numbers: Translate Data into Insights ([verify](#)), Regression Analysis: Simplify Complex Data Relationships ([verify](#)), The Nuts and Bolts of Machine Learning ([verify](#)), The Power of Statistics ([verify](#))

Skills

Programming Languages & Tools: Python (NumPy, Pandas, Matplotlib), R, SQL, Excel

Core Competencies & Methods: Statistical Modeling, Machine Learning, Regression & Classification, Data Analysis
